

Offer Homeowners A Smarter Way To Control Landscape Lighting

The landscape lighting control your clients want is now easier than ever to achieve. Pair a Kichler Design Pro LED DC Controller with a Vera Gateway and App to control and change lighting schedules, programs, and zones from any mobile device – anywhere. It's intuitive for homeowners to use and completely customizable to their lifestyle.

EASY-TO-USE APP

- Consumer-friendly interface is easy to setup and operate. All controls and programming are within the intuitive app and not the controller.
- Virtually unlimited zoning and scheduling capability. Creates total handheld control – program lighting zones to turn on/off at specific times (ex: 12 a.m.) or with events (ex: sunset, sunrise, etc.).
- Need to dim the 120V lights for entertaining or turn the lights on for a special event? Changes are at the homeowner's fingertips and will not interfere with the pre-defined schedules.
- Tie landscape lighting into a total smart home system to operate motion sensors, cameras, 120V exterior lighting or holiday lighting, thermostats, locks and more. Make any 120V device a smart device with a variety of inexpensive relays.
- Available for both Apple iOS and Android operating systems.

ESSENTIAL SAFETY FEATURES

- Customize control based on activity – so landscape lights can turn on when a motion sensor is triggered.
- Activate mobile alerts – homeowners can receive notification of triggered events.
- Create tiered administrator permission – allows homeowners to give contractors authorization for remote troubleshooting and programming.
- Cloud-based backup – protects against loss of data during a storm, power outage, etc.

KICHLER

Offer Homeowners A Smarter Way To Control Landscape Lighting

TECHNICAL SPECIFICATIONS

Features	Kichler SKU# 16082BK Vera™ Edge	Kichler SKU# 16083BK Vera™ Plus

HOW IT WORKS

Mobile Device

Download the Vera App to any smartphone, tablet or computer.

Wi-Fi

Plug in the Vera gateway and link to the home's Wi-Fi system.

Synch

The Vera App will locate the Kichler LED Controller and link it wirelessly to the Vera gateway.

Take Control

Using a Wi-Fi or cellular connection, homeowners can confidently control their landscape lighting anytime and anywhere. Secure cloud servers, powered by MIOS, safely broker the connection between the homeowner and their home.
